FIPS 140-1 Validation Certificate

The National Institute of Standards and Technology of the United States of America

The Communications Security
Establishment of the Government
of Canada

Certificate No. 221

The National Institute of Standards and Technology, as the United States FIPS 140-1 Cryptographic Module Validation Authority; and the Communications Security Establishment, as the Canadian FIPS 140-1 Cryptographic Module Validation Authority; hereby validate the FIPS 140-1 testing results of the Cryptographic Module identified as:

nShield F3 SCSI and nShield F3 Ultrasign SCSI by nCipher Corporation Ltd.

(When operated in FIPS mode)

In accordance with the Derived Test Requirements for FIPS 140-1, Security Requirements for Cryptographic Modules. FIPS 140-1 specifies the security requirements that are to be satisfied by a cryptographic module utilized within a security system protecting Sensitive But Unclassified Information (United States) or Designated Information (Canada) within computer and communications systems (including voice systems).

Products which use the above identified cryptographic module may be labeled as complying with the requirements of FIPS 140-1 so long as the product, throughout its life cycle, continues to use the validated version of the cryptographic module as specified in this certificate. The validation report contains additional details concerning test results. No reliability test has been performed and no warranty of the products by both agencies is either expressed or implied.

This certificate includes details on the scope of conformance and validation authority signatures on the reverse.

FIPS 140-1 provides four increasing, qualitative levels of security: Level 1, Level 2, Level 3, and Level 4. These levels are intended to cover the wide range and potential applications and environments in which cryptographic modules may be employed. The security requirements cover eleven areas related to the secure design and implementation of a cryptographic module. The scope of conformance achieved by the cryptographic modules as tested in the product identified as:

nShield F3 SCSI and nShield F3 Ultrasign SCSI by nCipher Corporation Ltd.

(Hardware Versions: nC4032W-400 and nC4032W-150 Build Standard D, Firmware Version: 6.0, Build 1.79.96; Hardware)

and tested by the Cryptographic Module is as follows:	Testing accredited labora	tory: DOMUS IT Security Laboratory, NVL	AP LAB CODE 200017-0	
Cryptographic Module Design:	Level 3	Module Interfaces:	Level 3	
Roles and Services:	Level 3*	Finite State Machine Model:	Level 3	
Physical Security: (Multi-Chip Standalone) EMI / EMC:	Level 3	Software Security:	Level 3	
	Level 3	Self Tests:	Level 3	
Key Management:	Level 3*			
Operating System Security Level N/A				
The following FIPS approved Cryptograph	nic Algorithms are used:		(Cert. #24); DES MAC; Triple-DES (Cert. #34); Triple-DES MAC; SHA-1 (Cert. #11); HMAC-SHA-1 (Cert. #11, vendor affirmed); (PKCS#1, vendor affirmed)	
The Cryptographic module also contains	SHA-256, S	pproved algorithms: AES; ARC FOUR; CAS HA-384, SHA-512 and RIPEMD160); MD2; MD D 160; El-Gamal; Diffie-Hellman (key agreeme	5; SHA-256; SHA-384; SHA-512;	
End user queries concerning the non-FIPS	S approved algorithms ma	ay be directed to their respective Cryptograp	hic Module Validation Authority.	
	Overall Lev	rel Achieved: 3
